

claims.

What is claimed is:

1. A body dryer comprising:

a housing having a front wall, a rear wall and a pair of side walls;

a plurality of vents positioned on the front wall of said housing;

5 a hot air blower assembly received within said housing for dispersing hot air through said vents;

means for varying the temperature of hot air generated by said hot air blower assembly.

2. The body dryer according to Claim 1 wherein said hot air blower

10 assembly comprises a fan having an air output with a plurality of heaters positioned adjacent thereto.

3. The body dryer according to Claim 2 wherein said means for adjusting the temperature of hot air comprises:

a switch means positioned on the top wall of said housing;

15 a microprocessor means in communication with said switch means for sequentially activating a select one of said heaters each time said switch means is actuated.

4. The body dryer according to Claim 1 further comprising a gravity actuated safety switch electrically connected to said hot air blower assembly for

disabling power thereto in the event said housing is overturned.

5. The body dryer according to Claim 1 wherein said housing front wall is convex so that said vents simultaneously project hot air upwardly, downwardly, and straight ahead.

5 6. The body dryer according to Claim 1 wherein each of said vents includes a plurality of pivotal louvers operably connected to an adjustment dial, said adjustment dial positioned on the front wall of said housing whereby said dial is rotated to pivot said louvers so as to redirect hot air.

7. The body dryer according to Claim 1 wherein said housing is pivotally
10 mounted on a weighted support stand that uprightly supports said housing.

8. The body dryer according to claim 7 wherein said support stand includes a planar base portion with a pair of spaced arms extending upwardly therefrom, each of said arms terminating at a distal end;

an adjustment knob releasably securing the distal end of each of said arms
15 to one of said housing sidewalls allowing said housing to be angularly adjusted.
